

Streamlit

→ website : streamlit.io

Terminal :

pip install streamlit

- Streamlit run purely on python with declarative code

No need of HTML CSS or JS

→ import streamlit as st

st.title ("Hello Chai App")

st.subheader ("Brewed with st")

st.text ("welcome to ground")

st.write ("Chose your fav. Chai")

local url: <https://localhost:8501>

drop
down
list

st.selectbox ("your fav chai:", ["Masala", "Lemon", "Adrak", "Kesar"])

st.write (f "your choon {chai}. Excellent")

st.success ("your chai has been brewed")

Assignment : Programming language picker

```
html_temp = """
```

```
<div>
```

```
<h2> Bank </h2>
```

```
</div>
```

```
"""
```

```
st.markdown(html_temp, unsafe_allow_html=True)
```

→ Widgets

```
import streamlit as st
st.title ("Chai Maker App")
```

button widget

```
if st.button ("Make Chai"):
    st.success ("your chai brewed")
```

checkbox widget

```
add1 = st.checkbox ("Add Masala")
```

```
if add1:
```

```
    st.write ("Masala added")
```

Radio button

```
tea_type = st.radio ("pick your chai base:",
                    ["milk", "water"])
```

```
st.write (f"selected base {tea_type}")
```

Selection box

```
flavour = st.selectbox ("Choose flavour",
                        ["Adrak", "kesar"])
```

```
st.write (f"selected flavour {flavour}")
```

slider

```
sugar = st.slider ("Sugar level", 0, 5, 2)
```

```
st.write (f" Sugar level {sugar}")
```

```
cups = st.number_input ("How many cups",
                        min_value = 1, max_value = 10,
                        step = 1)
```

```
name = st.text_input ("Enter your Name")
```

```
if name:
```

```
    st.write (f"welcome {name}")
```

//_

```
dob = st.date_input("select your dob")
st.write(f"your dob {dob}")
```

Assignment :- Age finder on user input

→ Layout
